

Dermistat

A PART OF THE MYOWN SKIN-PRODUCT FAMILY

Dermistat is a non-invasive inpatient or outpatient procedure which leverages a small sample of a patient's own skin to produce partial thickness skin grafts in as little as 3 days.

THE PROCESS

1

Skin Sample

2

3 Days

3

Application

With a sample of healthy skin, we can create a gel-like substance containing the patient's own skin.
